Family Clinic Dashboard

What is it?

One secure clinic platform where patients, doctors, reception and pharmacy each see only what they need.

Does it run? Four live doors

Patients

Admin

/medi-clinic/dashboard

Doctors

/medi-clinic/doctors

Pharmacy

/medi-clinic/pharmacy

Patient journey

Book

Pick a provider and shift online

Upload

Identity, history and invoices to a private bucket

Track

Appointments, prescriptions, card wallet, Family Care plans

Why this stack?

Supabase Auth

Trusted roles: owner, doctor, patient, pharmacist

RLS policies

The database itself blocks access to other patients

Private Storage

Documents open only via short-lived signed links

Business rules and POPIA basics

Least privilege

Each role sees the minimum: stock managers get no patient charts

Protect data

Masked cards only, no hard deletes, signed notes never rewritten

POPIA basics

Consent, minimum data, secure storage, access limited and legal review before real data

Design choices

Colour

Navy and blue match the clinic logo: calm, clinical, trusted

Font

Nunito Sans: rounded, friendly, very readable for all ages

Next

Doctor cards, payment gateway, notifications

Speaker script (about 60 seconds)

1. Family Clinic Dashboard (10s) Say it in one sentence: One secure clinic platform where patients, doctors, reception and pharmacy each see only what they need.

2. Does it run? Four live doors (10s) Base link nextjs-dashoard-psi.vercel.app. Each door has its own sign-in. Demo patient: patient1@nextmail.com.

3. Patient journey (12s) Patient books, uploads documents, tracks appointments and prescriptions. Next feature: a descriptive card per doctor (speciality, who to pick for which need). Demo placeholders show sample appointments.

4. Why this stack? (12s) Roles live in trusted Auth metadata, not editable by users. Row-level security enforces access in the database. Storage is private. Next.js keeps keys server-side.

5. Business rules and POPIA basics (14s) Least privilege, protected records, audit-friendly history. POPIA basics: lawful purpose, collect minimum, secure it, restrict access. Honest: proposal states legal review is needed before real clinical data; we do not claim certification.

6. Design choices (10s) Navy and blue come from the logo and signal trust. Nunito Sans is friendly and readable. Close with next steps.
